

# The most beautiful growth forms for every plant

We offer the horticultural industry a wide range of premium growth forms in many sizes, shapes and colors. In cooperation with market players we develop creative solutions for every plant in order to achieve an increased decorative appearance. This could be a holder for an amaryllis bulb, a form for a three-stemmed orchid, or a house number for a hedera. The added value that the forms create has shown to be a multitude of the cost.

## SINGLE BEND OR COMPOSITE PRODUCT

The diversity of the horticultural industry constantly invites us to innovate and it encourages originality. Besides the forms that have proven themselves in the market in the past years, together with clients we also discuss ideas in-depth in order to create new concepts or to adapt existing concepts so to meet industry and consumer demands. Our machines have the ability to create two or three dimensional forms, and in addition we can make composite products by welding various parts together.

## BLACK GALVANIZED WIRE

The forms are typically made of 0.12 inch black galvanized wire. This wire was designed by Bloks specifically to create an additional decorative appearance, but without distracting from the plant itself. Using our metal wire ensures a quality and sustainable product, as it does not contain any plastic, nor does it require the chemical treatment such as that used for bamboo. As part of the client's design decision our products can also be manufactured from standard galvanized or stainless steel wire.

## POT CLIP

For each design we offer we can realize a suitable product for various pot sizes. We have developed and patented a clip by which the growth form can easily be attached to the pot. The clip ensures that products stay in place during packaging and distribution, allowing the final presentation to always be optimal. The clips can be tailor made to fit perfectly on the rim of the pot depending on the size and shape of the form.

## METHOD

We start the introduction of all product concepts by developing prototypes; this gives the grower the ability to see and try various models. After receiving product approval from the client we start the production process. Once the order is completed, we pack the products and prepare them for shipment. In the majority of cases our delivery time is 6 to 7 weeks.
